EDUCATION

Toulouse INP-ENSEEIHT — Master's-level engineering degree, MFEE department

September 2026 to June 2029 · Toulouse, France

Fluid mechanics, energy and environment: flows, heat transfer, energy systems, numerical simulation.

Lycée Gay-Lussac — Preparatory classes in Mathematics and Physics (CPGE)

September 2024 to June 2026 · Limoges, France

Two-year intensive programme preparing for the competitive entrance exams to French engineering schools.

PROJECTS & EXPERIENCE

TIPE — Thermal tiles and atmospheric re-entry

2025 – 2026 · Preparatory classes

Supervised research project on how the material of a heat-shield tile affects heat diffusion and damage during atmospheric re-entry.

International mobility

Plan — semester 9 · United States (target destination)

Looking for a 17-week internship abroad in aeronautics or space.

SKILLS

Scientific: fluid mechanics, aerodynamics, thermodynamics, heat transfer, energy systems modelling

Numerical: numerical simulation and scientific computing (finite differences, Euler method, boundary conditions)

Experimental: materials measurement and characterisation, critical analysis of results

Languages: French (native), English (B2/C1), German (B1)

Qualities: curious, patient, a good listener

ACTIVITIES & INTERESTS

- **Space:** following reusable launchers (Starship, New Shepard, Ariane 6), with a particular interest in propulsion
- **Sport:** competitive horse riding for 5 years (show jumping and dressage, Galop 5), weight training 3 times a week
- **Environment:** took part in the Climate Fresk
